

Kysor™ On/Off Identification Guide

The K26RA fan clutch is a higher capacity fan clutch than the K22RA. The K26RA fan clutch housing is gold in color, the lining is marked with yellow on the outer edge, and the clutch shaft (hub mounting surface) is etched with K26RA.

The K22RA fan clutch housing is silver in color, the lining has no markings, and the clutch shaft (hub mounting surface) is etched with K22RA or has no marking.

NOTE: For the most part, components cannot be interchanged between the K22RA and K26RA clutches. Interchanging components between the two models may cause premature failure and may prevent the clutch from functioning properly.

When replacing the entire clutch assembly, a K26RA can be installed on any application that was originally equipped with a K22RA.

WARNING - Do not use a K22RA to replace a K26RA. High wear and early failure of the clutch may result if a K22RA is installed in place of a K26RA.

K22RA

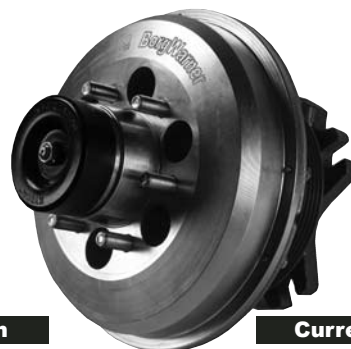

No color or ID groove around surface

Repair Kits	SEALS ONLY	LINING ONLY	SEAL AND LINING
K22RA	1033-08233-01	1033-08250-01	1033-05435-03
